## **DETAILED ACTION**

### ***Response to Arguments***

Applicant's arguments with respect to claims 1 – 32 have been considered and Examiner details the prior art with respect to rejected instant claims.

Barber discloses an access control system that restricts an user (first device) with applications/databases (second device) for users by subscribers only that includes authenticating user identification data; input means to receiving an identifier, translating received identifier to connect information (while not disclosing the IP address of the second device) using a translated identifier thus keeping the second device remaining anonymous to the first device. Barber discloses the broadly claimed independent claims disclosing the subject matter in Summary and in particular, Fig. 2 and 3 (associated text).

Examiner requests the Applicant to amend the claims in a manner to distinct applicant's invention with prior art with **attention** given to the instant specification paragraphs [0065 -0069 and 0078-0082] as depicted in Fig. 2A, 2B and 3. In particular, amend the independent claims to explicitly disclose the following: proxy server (121) along with media server (113); exchanging of pin code and verifying by the media server to overcome prior art rejection.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application

Art Unit: 2436

filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-32 are rejected under 35 U.S.C. 102(e) as being anticipated by Barber (Patent 6,502,193).

As per Claims 1, 5, 9, 14, 20 and 26, Barber teaches “acquiring a security code, receiving media containing said security code, translating said security code to an IP address corresponding to said second communication device and routing said receiving media to said second communication based on said IP address of said second communication device, said IP address of said second communication device remaining anonymous to said first communication device”. See Column 5 line 41 – Column 7 line 18.

As per Claims 2 – 4, 6 – 8, 10-13, 15 – 19, 21 – 15 and 27 – 32, Barber teaches “Pin code; security code is valid to at least one time; first communication validation”. See Barber Column 5 line 41 – Column 7 line 18.
